Introduction

This report presents the statistics on disposal and recovery/recycling of solid waste generated in Hong Kong in 2022. The information contained in this report is compiled from data collected from various sources, mainly including the records of government waste transfer and treatment facilities, such as waste intake records of the treatment facilities. Data are also collected through statistical surveys, including collecting data on recycling quantity of various recyclables from recyclers, and conducting waste composition survey by taking samples at waste treatment facilities to collect data on disposal quantity of various components of municipal solid waste. The data are used to compile annual statistics on recovery and disposal quantities by waste category after data collating and processing. The classification of solid waste and the methodology adopted in data collection are explained in [Appendix 1](#), whereas terms related to the Waste Management System of Hong Kong are elaborated in [Appendix 2](#).

Key observations of the local waste disposal and resource recovery scene in 2022 are summarised in the ensuing paragraphs, with a view to facilitating readers to have a quick overview of the achievements and challenges of our waste management efforts. Detailed statistics on waste disposal and resource recovery are provided in Chapters 2 and 3 respectively. Figures presented in this report may not add up to the respective totals due to rounding.

Key Observations

Waste Disposal in 2022

Total Solid Waste

Solid waste comprises municipal solid waste (MSW), overall construction waste, and special waste. In 2022, the total quantity of solid waste disposed of at the strategic landfills was 5.74 million tonnes. The average daily quantity was 15,725 tonnes per day (tpd), which has increased by 1.2% as compared to 2021 (**Plate 2.1**).

Municipal Solid Waste

Municipal solid waste includes domestic waste, commercial and industrial (C&I) waste.

In 2022, the quantity of MSW disposed was 11,128 tpd (4.06 million tonnes), which represented a decrease of 2.0% as compared to 2021. Discounting the factor of population growth, the disposal rate of MSW was 1.51 kg/person/day, as compared to 1.53 kg/person/day in 2021.

The major component of MSW is domestic waste. Its quantity of disposal was 6,797 tpd (2.48 million tonnes) in 2022, which has decreased by 2.8% as compared to 2021. On the other hand, the quantity of C&I waste disposed of was 4,332 tpd (1.58 million tonnes) in 2022, which has decreased by 0.8% when compared to 2021.

Plates 2.8 and 2.9 show the composition of MSW disposed of at landfills in 2022.

Of the 11,128 tonnes of MSW landfilled each day in 2022, some 3,302 tonnes (30% of MSW) were **food waste**, which has decreased by 3.9% as compared to 2021. C&I food waste disposal rate decreased from 0.15 kg/person/day in 2021 to 0.13 kg/person/day in 2022, while domestic food waste disposal rate decreased marginally from 0.32 kg/person/day in 2021 to 0.31 kg/person/day in 2022.

The second largest constituent of MSW was **waste plastics**. Some 2,369 tpd (21% of MSW) were disposed of at landfills in 2022, which has increased by 1.6% as compared to 2021. The third largest constituent of MSW was **waste paper**, with a disposal quantity of 2,244 tpd (20% of MSW) in 2022, which has increased marginally by 0.4% as compared to 2021.

Overall Construction Waste

Regarding construction waste, the quantity of waste generation dropped by about 3,100 tonnes per day (6%) as compared with 2021 to 49,865 tonnes per day, among which 45,736 tonnes per day of construction waste (92% of total) were recovered either through transferring to projects for direct reuse or storing at public fill reception

facilities for reuse in the future. The remaining 4,128 tonnes per day of construction waste (8% of total) was disposed of at landfills, which was 483 tonnes more than that in 2021 and was on par with the level before COVID-19.

Special Waste

In 2022, the quantity of special waste disposed of at landfills was 469 tpd (0.17 million tonnes), which has decreased by 11.4% as compared to 2021. The drop was mainly driven by the decrease in sewage works screenings. On the other hand, as from April 2015, the Sludge Treatment Facility (T • PARK) in Tuen Mun has started treating dewatered sewage sludge from major sewage treatment works managed by Drainage Services Department by incineration, leading to a cumulative reduction of 96% in disposal of dewatered sludges at landfills in 2022 as compared with 2014. On average, 1,058 tonnes of dewatered sewage sludges per day was treated at the T • PARK in 2022.

Resource Recovery in 2022

Hong Kong's capacity to consume raw or recycled materials in local production is relatively limited under its economic structure, compared to countries that rely heavily on primary or secondary industries to sustain and promote their economies. As a result, around 80% of MSW recyclables locally recovered are delivered outside Hong Kong for recycling and around 20% are recycled locally (**Plate 3.3**). Similar to other industries that constitute our economy, the local recycling industry is subject to fluctuations induced by business cycles and market conditions. Authorities in nearby cities and economies have further tightened their import control regimes in recent years. Local recyclables not meeting the import standards could no longer enter such places for further processing. In response, the local waste recovery industry continued to expand local recycling.

The overall MSW recovery rate in 2022 was 32%, which has increased from 31% in 2021 (**Plate 3.2**). MSW recovered for local recycling was about 420,000 tonnes in 2022, representing a significant increase of about 51% compared to about 280,000 tonnes in 2021 (**Plate 3.5**). The changes reflect the improved performance of the local recycling industry amid the strengthened waste reduction and recovery measures. On the other hand, the quantity delivered outside Hong Kong for recycling decreased from about 1.57 million tonnes in 2021 to about 1.50 million tonnes in 2022. The decrease was mainly attributed to reduction in recycling quantity of non-ferrous metals.

With the EPD expanding the community recycling network and strengthening various waste reduction and recovery measures, the quantities of plastics, food waste, electrical and electronic equipment, and yard waste recycled locally increased year-on-year by about 16%, 9%, 15% and 30% respectively (**Plate 3.11**).

The quantity of **plastic recyclables** recycled locally rose significantly from 103,600 tonnes in 2021 to 119,900 tonnes in 2022. The increase was attributed to the enhanced control of transboundary movements of plastic wastes under the amendment to the Basel Convention starting from 2021, and the tightening of import control by importing economies worldwide. The implementation of various new measures by the Hong Kong government further promote waste plastic recovery, including extension of Pilot Scheme on Collection and Recycling Services of Plastic Recyclable Materials and launch of Stage 2 of Reverse Vending Machines (RVM) Pilot Scheme, leading to the gradual increase in local recycling quantity by the local recycling industry.

The quantity of **food waste** recycled locally increased from 66,100 tonnes in 2021 to 71,800 tonnes in 2022. Organic Resource Recovery Centre Phase 1 (O · PARK1) started to receive and process food waste from the industrial and commercial industries in July 2018. In addition, the EPD has implemented the Food Waste/Sewage Sludge Anaerobic Co-digestion Trial Scheme at the Tai Po Sewage Treatment Works in 2019 to treat food waste, launched a larger scale Pilot Scheme on Food Waste Collection in 2021 and the Trial Scheme on Food Waste Collection in Public Rental Housing (PRH) Estates in 2022. These arrangements help promote food waste recycling.

Recovery rate of **waste electrical and electronic equipment (WEEE)** rose marginally from 74% in 2021 to 75% in 2022. The recyclable value of WEEE is relatively high which attracts local recyclers to actively engage in WEEE recovery. The full implementation of the producer responsibility scheme on WEEE in 2018 and the commissioning of the WEEE Treatment and Recycling Facility (WEEE · PARK) by the Government further promoted beneficial recycling and reuse of the regulated WEEE. Coupled with the continuous increase in the public's awareness of recycling of other WEEE, the recovery rate of WEEE remained high.

2. Waste Quantities and Characteristics

**Plate 2.1 Disposal of total solid waste at landfills in 2022
- By main waste category**

Waste category ⁽¹⁾	Average daily quantity (tpd) and year-on-year growth rate ⁽³⁾	
a. Municipal solid waste (i) Domestic waste (ii) Commercial and industrial waste	11,128 6,797 4,332	(-2.0%) (-2.8%) (-0.8%)
b. Overall construction waste	4,128	(13.2%)
c. Special waste ⁽²⁾	469	(-11.4%)
d. Total waste received at landfills (a + b + c)	15,725	(1.2%)
Notes : 1. Please refer to Appendix 1 for the classification of solid waste. 2. The quantity does not include special waste not disposed of at landfills. 3. Figures in brackets refer to year-on-year (y-o-y) growth rates.		

**Plate 2.2 Disposal of total solid waste at landfills in 2021 and 2022
- By main waste category**

Note :

1. The quantity does not include special waste not disposed of at landfills.

2. Waste Quantities and Characteristics

Notes :

- From 21 November 2021 onwards, SENTX has replaced SENT to accept C&D waste.
- Waste from IETS, IWTS, WKTS, OITF and NLTS was transferred to WENT by sea.
- Waste from STTS and NWNTTS was transferred to NENT by road.
- From July 2018 onwards, O · PARK1 at Siu Ho Wan has commenced operation to convert food waste into biogas for electricity generation whilst the residues from the process be produced as compost for landscaping and horticulture use. O · PARK2 at Sha Ling is scheduled for commissioning in 2024.
- From April 2015 onwards, dewatered sewage sludge from major sewage treatment works managed by Drainage Services Department has been treated by incineration at T · PARK, and the residue and ash of incineration have been disposed of at WENT.
- From June 2021 onwards, Y · PARK at Tsang Tsui has commenced operation to convert suitable yard waste into various recyclable products such as wood chips, wood boards and wood beam through the processes of sorting, cutting, shredding, etc.

2. Waste Quantities and Characteristics

Notes :

1. The geographical distribution of solid waste arisings is mainly estimated from waste intake records taken at waste treatment facilities and should be regarded as indicative reference only.
2. Special waste is not included.
3. Districts under each main region are sorted in alphabetical order.
4. Breakdown into individual islands / areas is not available.
5. Mui Wo is not included.

Plate 2.7 Per capita disposal rates ⁽¹⁾ of MSW, domestic waste and commercial & industrial waste from 2013 to 2022

Note :

1. The per capita disposal rates are calculated based on the mid-year population data for the respective years according to the latest estimates released by the C&SD in August 2023.

2. Waste Quantities and Characteristics

Plate 2.8		Composition of MSW disposed of at landfills in 2022 - By waste type			
Composition	Average daily quantity (tpd) and percentage share by weight ⁽³⁾				
	Domestic waste (a)		Commercial & industrial waste (b)		Municipal solid waste (c) = (a) + (b)
Glass	126	(1.9%)	85	(2.0%)	211 (1.9%)
Metals	118	(1.7%)	130	(3.0%)	248 (2.2%)
Paper	1,273	(18.7%)	970	(22.4%)	2,244 (20.2%)
Plastics	1,311	(19.3%)	1,058	(24.4%)	2,369 (21.3%)
Putrescibles	2,424	(35.7%)	1,071	(24.7%)	3,495 (31.4%)
Textiles	250	(3.7%)	138	(3.2%)	388 (3.5%)
Wood	31	(0.5%)	176	(4.1%)	207 (1.9%)
Household hazardous wastes (HHWs) ⁽¹⁾	79	(1.2%)	53	(1.2%)	132 (1.2%)
Others ⁽²⁾	1,185	(17.4%)	651	(15.0%)	1,836 (16.5%)
Total	6,797	(100.0%)	4,332	(100.0%)	11,128 (100.0%)
Notes :					
1. Household hazardous wastes (HHWs) include paints, pesticides, fuels, cylinders, batteries, electrical appliances, mercury-containing fluorescent lamps and medicines, etc.					
2. Others include bulky items and other miscellaneous waste materials.					
3. Figures in brackets refer to percentage shares by weight in total disposal quantity of the corresponding waste type.					

2. Waste Quantities and Characteristics

Plate 2.9 **Composition of MSW disposed of at landfills in 2022**
- By major waste type

Composition ⁽¹⁾	Average daily quantity (tpd) and percentage share by weight ⁽⁴⁾					
	Domestic waste		Commercial & industrial waste		Municipal solid waste	
	(a)		(b)		(c) = (a) + (b)	
Glass						
- Glass bottles	103	(1.5%)	72	(1.7%)	175	(1.6%)
- Other glass	23	(0.3%)	13	(0.3%)	36	(0.3%)
Glass sub-total	126	(1.9%)	85	(2.0%)	211	(1.9%)
Metals						
- Ferrous metals	73	(1.1%)	99	(2.3%)	172	(1.5%)
- Non-ferrous metals	45	(0.7%)	31	(0.7%)	76	(0.7%)
Metals sub-total	118	(1.7%)	130	(3.0%)	248	(2.2%)
Paper						
- Cardboard / Newsprint / Office paper	445	(6.5%)	424	(9.8%)	869	(7.8%)
- Tetrapak	49	(0.7%)	26	(0.6%)	75	(0.7%)
- Others ⁽²⁾	780	(11.5%)	520	(12.0%)	1,300	(11.7%)
Paper sub-total	1,273	(18.7%)	970	(22.4%)	2,244	(20.2%)
Plastics						
- Plastic bags	519	(7.6%)	360	(8.3%)	878	(7.9%)
- Plastic bottles	127	(1.9%)	80	(1.8%)	206	(1.9%)
- Plastic / Polyfoam dining wares	141	(2.1%)	86	(2.0%)	227	(2.0%)
- Others ⁽³⁾	524	(7.7%)	533	(12.3%)	1,057	(9.5%)
Plastics sub-total	1,311	(19.3%)	1,058	(24.4%)	2,369	(21.3%)
Putrescibles						
- Food waste	2,312	(34.0%)	991	(22.9%)	3,302	(29.7%)
- Yard waste	112	(1.6%)	80	(1.9%)	192	(1.7%)
Putrescibles sub-total	2,424	(35.7%)	1,071	(24.7%)	3,495	(31.4%)

Notes :

1. The waste classification was simplified starting from 2020 by making reference to practices of other economies and grouping waste types with similar natures to enhance the precision of estimation.
2. Other paper waste includes tissue paper, paper bags, paper dining wares, etc.
3. Other plastics waste includes transparent stretch film for packaging, polyfoam packaging, toys, off-cuts, scrap, etc.
4. Figures in brackets refer to percentage shares by weight in total disposal quantity of the corresponding waste type.

2. Waste Quantities and Characteristics

Plate 2.10 Composition of MSW disposed of at landfills
in percentages in 2021 and 2022
- By major waste type

Note :

- Others include textiles, wood, yard waste, household hazardous wastes, bulky items and miscellaneous waste materials.

Plate 2.11 Composition of municipal food waste disposed of at landfills
in 2021 and 2022
- By waste category

2. Waste Quantities and Characteristics

Plate 2.12 Disposal and reuse of overall construction waste in 2021 and 2022

Note :

- Public fill reception facilities (PFRFs) are managed by CEDD for receiving inert construction waste (also known as public fill) appropriate for reuse. At present, four PFRFs are in operation, namely Tseung Kwan O Area 137 Fill Bank, Tuen Mun Area 38 Fill Bank, Chai Wan Public Fill Barging Point and Mui Wo Temporary Public Fill Reception Facility

2. Waste Quantities and Characteristics

**Plate 2.13a Disposal of special waste at landfills in 2022
- By special waste type**

Special waste type	Average daily quantity ⁽¹⁾ (tpd) and year-on-year growth rate ⁽⁷⁾	
Abattoir waste	9	(40.8%)
Animal carcasses and kennel waste	6	(33.0%)
Asbestos waste	3	(-27.1%)
Chemical waste other than asbestos waste	4	(9.4%)
Clinical waste (with package material) ⁽²⁾	4	(227.9%)
Dewatered dredged materials	0	(-96.7%)
Dewatered sludges ⁽³⁾	34	(-14.4%)
Dewatered waterworks sludge	87	(2.1%)
Incineration ash and stabilised residue	129	(-11.2%)
Livestock waste ⁽⁴⁾	76	(2.0%)
Sewage works screenings	53	(-31.4%)
Waste tyres ⁽⁵⁾	47	(-17.2%)
Others ⁽⁶⁾	16	(1.8%)
All special waste disposed at landfills	469	(-11.4%)

Notes :

- Some types of special waste may not arise and be disposed of daily throughout the whole year. The average daily quantity is obtained by dividing the total amount of waste disposed of at landfills in the whole year by the number of days in the whole year.
- Clinical waste is incinerated at CWTC except during normal maintenance or emergency shut-down maintenance of the incineration treatment system for more than two days. During the shutdown, clinical waste is packed and transferred to designated landfill for disposal in accordance with the Clinical Waste Disposal License of CWTC.
- Dewatered sludges include dewatered sludges and other sludges from industrial activities. Dewatered sludges originate from sewage treatment works managed by the Drainage Services Department, wastewater treatment facilities and grease trap waste treatment facility at refuse transfer stations managed by the EPD, and private sewage treatment plants. Except that dewatered sewage sludge from major sewage treatment works managed by Drainage Services Department is treated by incineration at T • PARK, other sludges are disposed of at WENT and NENT Landfills.
- In 2022, the generation of livestock waste amounted to 160 tpd, out of which 76 tpd were disposed of at landfills. Livestock waste disposed of at landfills mainly include the livestock waste collected by the free collection service for solid livestock waste provided to local livestock farmers by the Government. The remaining livestock waste was treated by other environmentally-acceptable means such as on-site composting, aerobic treatment, and dry muck-out.
- Waste tyres are shredded or cut prior to disposal at landfills.
- Others include condemned goods, contaminated waste and government items.
- Figures in brackets refer to year-on-year (y-o-y) growth rates. It should be noted that special waste types with small tpd figures may be subject to strong y-o-y fluctuations due to small base numbers.

2. Waste Quantities and Characteristics

**Plate 2.13b Treatment of special waste not disposed of at landfills in 2022
- By special waste type**

Special waste type	Treatment method	Average daily quantity ⁽¹⁾ (tpd) and year-on-year growth rate ⁽⁶⁾	
Chemical waste other than asbestos waste	CWTC	22	(-26.6%)
Clinical waste	CWTC	12	(5.0%)
Grease trap waste	WKTS ⁽²⁾	469	(-4.3%)
Horse stable waste	AWCP	25	(-2.3%)
Dredged mud and excavated materials	Marine dumping ⁽³⁾	5,205	(58.3%)
Dewatered sewage sludge ⁽⁴⁾	Incineration at T • PARK	1,058	(-5.8%)
Furnace bottom ash	Concrete manufacturing, stored in lagoon ⁽⁵⁾	59	(-26.3%)
Pulverised fuel ash	Concrete manufacturing, stored in lagoon ⁽⁵⁾	663	(-16.8%)

Notes :

1. Some types of special waste may not arise and be treated daily throughout the whole year. The average daily quantity is obtained by dividing the total amount of waste treated outside landfills in the whole year by the number of days in the whole year.
2. The figure is the quantity of grease trap waste treated by the Grease Trap Waste Treatment Facility at WKTS.
3. The density of the dredged mud and excavated materials is assumed to be one tonne per cubic metre.
4. Dewatered sewage sludge from major sewage treatment works managed by Drainage Services Department has been treated by incineration at T • PARK from April 2015 onwards.
5. Furnace bottom ash and pulverised fuel ash are wastes resulting from coal-fired electricity generation. Their figures are provided by the Power Companies.
6. Figures in brackets refer to year-on-year (y-o-y) growth rates. It should be noted that special waste types with small tpd figures may be subject to strong y-o-y fluctuations due to small base numbers.

2. Waste Quantities and Characteristics

Plate 2.14 **Composition of MSW disposed of at landfills**
in percentages from 2018 to 2022
- By major waste type

Total disposal (tpd)	11,428	11,057	10,809	11,358	11,128
y-o-y change (%)	6.5	-3.2	-2.2	5.1	-2.0

Note :

- Others include textiles, wood, yard waste, household hazardous wastes, bulky items and miscellaneous waste materials.

2. Waste Quantities and Characteristics

Plate 2.15 **Composition of MSW disposed of at landfills**
in quantities from 2018 to 2022
- By major waste type

Total disposal (tpd)	11,428	11,057	10,809	11,358	11,128
y-o-y change (%)	6.5	-3.2	-2.2	5.1	-2.0

Note :

- Others include textiles, wood, yard waste, household hazardous wastes, bulky items and miscellaneous waste materials.

2. Waste Quantities and Characteristics

Plate 2.16 Disposal and reuse of overall construction waste from 2018 to 2022

Total generation (tpd)	49,612	48,269	56,622	53,011	49,865
y-o-y change (%)	-6.7	-2.7	17.3	-6.4	-5.9

Notes :

- Public fill reception facilities (PFRFs) are managed by CEDD for receiving inert construction waste (also known as public fill) appropriate for reuse. At present, four PFRFs are in operation, namely Tseung Kwan O Area 137 Fill Bank, Tuen Mun Area 38 Fill Bank, Chai Wan Public Fill Barging Point and Mui Wo Temporary Public Fill Reception Facility.
- Figures in brackets refer to percentage shares by weight.

2. Waste Quantities and Characteristics

Plate 2.17 Overall construction waste received by treatment facilities ⁽¹⁾ from 2018 to 2022

					Unit : tpd
Public fill reception facilities	33,094	30,081	32,536	26,782	33,112
Sorting facilities	1,762	1,670	1,439	1,699	1,638
Landfills	2,974	2,894	2,592	2,548	2,845
Waste concrete	393	373	395	319	300
C&D waste	2,581	2,522	2,197	2,230	2,545

Notes :

- Under the Construction Waste Disposal Charging Scheme, 71 dollars is charged per tonne of public fill disposed of at public fill reception facilities, 175 dollars per tonne of construction waste at sorting facilities and 200 dollars per tonne of construction waste at landfills.
- C&D waste directly received by landfills excludes C&D waste from sorting facilities, but includes a small quantity of C&D waste from OITF.
- After sorting, inert material will be transferred from sorting facilities to public fill banks, and non-inert C&D waste to landfills.

Plate 3.1 **Generation, disposal and recovery of MSW
in 2021 and 2022**

Total generation ⁽¹⁾ : 5.99 million tonnes
2021

Total generation ⁽¹⁾ : 5.97 million tonnes
2022

Notes :

1. Generation of MSW is the sum of MSW disposed of at landfills and MSW recovered for recycling.
2. A total of 1.84 million tonnes of recyclables were recovered for recycling in 2021, of which, 1.57 million tonnes (85%) were delivered outside Hong Kong for recycling and 0.28 million tonnes (15%) recycled locally.
3. A total of 1.91 million tonnes of recyclables were recovered for recycling in 2022, of which, 1.50 million tonnes (78%) were delivered outside Hong Kong for recycling and 0.42 million tonnes (22%) recycled locally.

Plate 3.2 Recovery rates of MSW, domestic waste, and commercial & industrial waste from 2018 to 2022

Plate 3.3 **Recyclables recovered from MSW in 2022**
- By type of recyclable

Recyclable type	Quantity of recovered recyclables (thousand tonnes) and percentage share by weight ⁽⁵⁾			
	Delivered outside Hong Kong for recycling (a)	Recycled locally (b)	Total recovered for recycling (c) = (a) + (b)	
Paper	579.7 (38.7%)	3.8 (0.9%)	583.5 (30.5%)	
Plastics	1.0 (0.1%)	119.9 (28.9%)	120.9 (6.3%)	
Ferrous metals	779.5 (52.1%)	105.1 (25.3%)	884.6 (46.2%)	
Non-ferrous metals	131.7 (8.8%)	2.5 (0.6%)	134.2 (7.0%)	
Food waste ⁽¹⁾	0.0 (0.0%)	71.8 (17.3%)	71.8 (3.8%)	
Glass ⁽²⁾	0.0 (0.0%)	19.5 (4.7%)	19.5 (1.0%)	
Rubber tyres ⁽³⁾	0.0 (0.0%)	10.2 (2.5%)	10.2 (0.5%)	
Textiles	4.2 (0.3%)	12.7 (3.1%)	16.9 (0.9%)	
Wood	0.0 (0.0%)	11.8 (2.8%)	11.8 (0.6%)	
Electrical and electronic equipment	1.5 (0.1%)	46.5 (11.2%)	47.9 (2.5%)	
Yard waste ⁽⁴⁾	0.0 (0.0%)	11.4 (2.7%)	11.4 (0.6%)	
Total	1,497.6 (100.0%)	415.2 (100.0%)	1,912.8 (100.0%)	

Notes :

1. The quantity of food waste recycled locally includes those recycled by industrial operators, those recycled at O • PARK and OITF, and those recycled by non-government organizations.
2. Glass beverage bottles recovered for reuse through deposit-and-refund system operated by local beverage manufacturers are not included.
3. The quantity includes reuse, retreading and recycling of vehicle tyres and retreading of aircraft tyres in Hong Kong.
4. The quantity of yard waste recycled locally includes yard waste recycled on-site and off-site within Hong Kong and those recycled at Yard Waste Recycling Centre (Y • PARK).
5. Figures less than 50 tonnes are shown as 0.0. Figures in brackets refer to percentage shares by weight.

3. Resource Recovery and Recycling

Plate 3.4 Recyclables recovered from MSW in percentages in 2021 and 2022
- By type of recyclable

Total resource recovered : 1.84 million tonnes

2021

Total resource recovered : 1.91 million tonnes

2022

Note :

- Others include glass, wood, rubber tyres, textiles, food waste, electrical and electronic equipment, and yard waste.

from 2018 to 2022
- By major type of recyclable material

Total recyclables recycled locally (thousand tonnes)	144.9	203.1	225.6	275.3	415.2
y-o-y change (%)	151.3	40.2	11.1	22.0	50.8

Note :

- Others include paper, metals, wood, rubber tyres, textiles, and yard waste.

Plate 3.11 **Recyclables recovered from MSW recycled locally in quantities from 2018 to 2022**
- By major type of recyclable material

Total recyclables recycled locally (thousand tonnes)	144.9	203.1	225.6	275.3	415.2
y-o-y change (%)	151.3	40.2	11.1	22.0	50.8

Note :

- Others include paper, metals, wood, rubber tyres, textiles, and yard waste.

Waste Classification and Terminology

Solid waste is classified into three main categories by making reference to the sources of waste and the institutional arrangements for waste collection and disposal. These three main categories of solid waste are municipal solid waste, overall construction waste and special waste. The detailed interpretations of some commonly used terms are described below.

Municipal solid waste includes domestic waste, and commercial and industrial waste.

- **Domestic waste** refers to household waste, waste generated from daily activities in institutional premises (e.g. schools, government offices) and refuse collected from public cleansing services. Public cleansing waste includes dirt and litter collected by the Food and Environmental Hygiene Department (FEHD), marine refuse collected by the Marine Department and waste from country parks collected by the Agriculture, Fisheries and Conservation Department (AFCD).
- **Commercial and industrial waste** is waste arising from shops, restaurants, hotels, offices, markets in private housing estates and industrial activities, and does not include construction waste, chemical waste and other special waste. It is collected mainly by private waste collectors. However, some industries may deliver their industrial waste directly to landfills for disposal.
- Municipal solid waste contains a small portion of bulky items such as furniture, pianos and bicycles which cannot be handled by conventional compactor type refuse collection vehicles. These items are regarded as **bulky waste** and are usually collected separately.

Overall construction waste includes waste or surplus materials arising from construction activities such as site clearance, refurbishment, renovation, demolition, land excavation and road works. It also includes waste concrete that is generated from concrete batching plants, cement plaster/mortar plants not set up inside construction sites. The overall construction waste is sorted into inert materials (called public fill) and construction and demolition (C&D) waste (basically non-inert waste), where inert materials like debris, rubble, concrete and earth are reused in construction sites, or as fill in reclamation sites when available. C&D waste are disposed of at landfills.

Special waste is waste that requires special disposal arrangement. It includes abattoir waste, animal carcasses, asbestos, chemical waste, clinical waste, condemned goods, CWTC stabilized residue and incineration ash, dredged mud and excavated materials, sewage treatment and water treatment sludge, T • PARK incineration ash and residue, grease trap waste, livestock waste, sewage works screenings, waste tyres, furnace bottom ash, pulverised fuel ash, etc.

- **Chemical waste** is defined in the Waste Disposal (Chemical Waste) (General) Regulation under the Waste Disposal Ordinance (Cap. 354). Chemical waste can be any substance arising from any process or trade activity which contains chemical in such form, quantity or concentration that can cause pollution to the environment or become a risk to health.

Current classification of solid waste

Monitoring Methodology

Solid waste data are mainly collected from the following sources:

- Waste intake records taken at waste management facilities;
- Results of annual survey on waste composition conducted at landfills and RTSs;
- Results of waste recovery survey conducted on the local recycling industry;
- Statistics provided by relevant groups of EPD; and
- Statistics provided by other departments including FEHD, CEDD and C&SD.

Under the statistical framework of solid waste, waste is an unwanted material or product which has been consumed, or is unsuitable for consumption as perceived by the generator. The interpretations of common terminology of Hong Kong's Waste Management System are detailed below¹.

- **Waste management system (WMS)** of Hong Kong comprises the public sector, private recyclers, and green groups in Hong Kong which engage in treatment of wastes or recyclables.
- **Waste disposal** is locally generated waste that are disposed of at strategic landfills managed by EPD.
- **Resource recovery** refers to recycling, reuse, or composting of locally recovered recyclables in Hong Kong or other economies. Resource recovery activities divert wastes from local landfills for further uses. The quantity of recyclables recovered includes recyclables delivered outside Hong Kong for recycling as well as recyclables recycled locally.
- **Waste generation** is waste locally generated in Hong Kong and passes through the WMS. The generation quantity of waste equals the sum of quantities of waste disposal and resource recovery, as derived below:

$$\text{Waste generation} = \text{Waste disposal} + \text{Resource recovery}$$

- **Waste avoidance** refers to the reduction in the quantity of waste entering the WMS, as a result of preventing the creation of waste at source or treatment of waste outside of the WMS. For example, wastes directly recycled or reused at the place of generation by private sector (e.g. on-site composting) or exchange of unprocessed second-hand products are regarded as waste avoidance. Waste avoidance falls outside of the scope of WMS, and is not measured in waste statistics in this report.
- **Waste recovery rate** is calculated as the proportion of resource recovery in waste generation, as indicated below.

$$\begin{aligned}\text{Waste recovery rate} &= \frac{\text{Resource recovery}}{\text{Waste generation}} \times 100\% \\ &= \frac{\text{Resource recovery}}{\text{Waste disposal} + \text{Resource recovery}} \times 100\%\end{aligned}$$

- **Per capita waste disposal rate** is the quantity of waste disposed of at landfills on a daily basis by an average person of the Hong Kong population, as derived below:

$$\text{Per capita waste disposal rate} = \frac{\text{Average daily quantity of waste disposal}}{\text{mid-year population}}$$

¹ The terminology applies to municipal solid waste (MSW) and overall construction waste only.
